

Product info page: `Flex` Mosaic displays

The new Flex mosaic display system designed & manufactured by Vision Display allows you to display your sheet Mosaic product easily and cost effectively.

Flex is a very simple display system. You decide how you want to display your Mosaics, either in wall mounted racks or on a free standing island display unit. Vision then manufacture the display racks and supply you with special white plastic panels which you then bond your Mosaic products onto.

Simply flex & fit the display panels into the display racks and you are ready to go!

- * Your customer is able to remove the panels from the display to compare the mosaics to other plain tile products around your showroom.
- * The plastic panel lays flat when out of the display and flexes easily when fitted back into the display unit.
- * The white plastic panel looks clean & gives the appearance of a grouted product.
- * You can add product information/labels to the rear of the panel if required.
- * The panels can be supplied cut for full sheets/half-sheets or 1/3rd width mosaic sheets, or mixtures of any of these - you decide!
- * Replacement plastic panels available from stock.
- * Wall racks made to show as many facings of mosaic as you require to fill your wall space available.

Flexible Mosaic display panels with easy to fit wall racks - made to your size. Simple.

Island tower & `cruciform` versions now available.

**** Important:** our extensive tests have found that Evo-Stik cartridge adhesive "STICKS LIKE SH*T" is the only adhesive that will bond your mosaic sheets to the plastic and move with the product as you flex them.

Use anything else at your peril!

Available from all good DIY/Builders merchants.
